

Static oven to make acrylic sheets malleable to obtain molding by stretching, by vacuum or by templates.

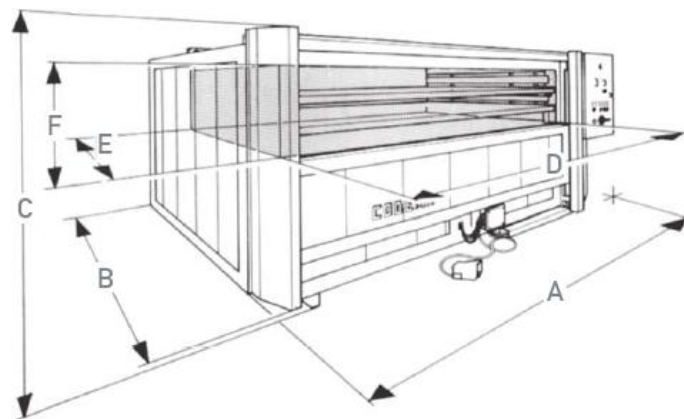

TECNOLOGY FOR PLASTIC MATERIALS PROCESSING

The KALOR oven has been designed and constructed to make acrylic sheets malleable to obtain molding by stretching, by vacuum or by templates.

- Vertical sliding door in order to avoid depression inside the oven, to maintain a constant temperature and to protect the operator from burning.
- Extractable shelves for convenient loading and unloading.
- Completely extractable shelves to make possible the use of moulds.
- A powerful electric generator heats the oven rapidly.
- One or more fan permits regular air flow inside the oven, guaranteeing uniform heating.
